

Use-Case Flow Specification

Pet Adoption & Shelter Management System — Problem Statement #57

Use Case: UC-02 — Submit Adoption Application

Primary Actor: Adoption Applicant

Supporting Actor: Shelter Staff (receives the application in the review queue)

Related: Requires UC-10 Log In; follows UC-01 Search & Filter Pets; the created application is screened in UC-03 Screen Adopter Questionnaire. UC-02 has no include or extend relationships of its own.

Preconditions

- The applicant is logged in (UC-10).
- The applicant has selected, from the catalog (UC-01), an animal whose status is 'Ready for Adoption' (FR-001).

Postconditions

- Success: An application exists in state 'Pending Review', linked to the animal and the applicant, and is in the staff review queue (FR-003). The animal's status is unchanged.
- Failure: No application is created; the applicant's answers are kept on screen or as a local draft (see Alternate Flow 4a and Exception Flows E1, E2).

Main Success Scenario

1. Applicant selects "Apply to Adopt" on the animal's profile. The system displays the adopter questionnaire.
2. Applicant enters housing type, household members, other pets and adoption experience, and submits the questionnaire (FR-003).
3. System validates that all required fields are complete and well-formed.
4. System confirms that the animal is still 'Ready for Adoption' and that the applicant has no open application for it.
5. System creates the application with status 'Pending Review', links it to the animal and the applicant, and places it in the staff review queue.
6. System shows a confirmation with the application reference; the application appears under the applicant's "My Applications".
7. Use case ends successfully. Staff screening continues in UC-03.

Alternate Flow — 4a. Animal No Longer Available or Duplicate Application

- 4a1. At step 4 the system finds that the animal has been removed from the catalog or is no longer 'Ready for Adoption' (e.g., another application was approved), or that the applicant already has an open application for it.
- 4a2. System does not create an application and explains why, showing the existing application if it is a duplicate.
- 4a3. System keeps the questionnaire answers so the applicant can reuse them for a different animal.
- 4a4. Use case ends; applicant may return to UC-01 Search & Filter Pets.
